

PIRAYE PIRHADI

Product Manager | Enterprise Platforms & Workflow Automation

Tehran, Iran · Open to Remote, Hybrid & On-site Opportunities · +98 933 506 8236 · piraye.777@gmail.com · [linkedin.com/in/piraye-pirhadi](https://www.linkedin.com/in/piraye-pirhadi)

PROFESSIONAL SUMMARY

Product Manager with experience delivering internal platforms and workflow automation products in financial services. Skilled in product discovery, requirements prioritization, roadmap development, stakeholder alignment, and data-informed decision-making.

PROFESSIONAL EXPERIENCE

Agah Group · Tehran, Iran

Product Manager — Enterprise Platforms & Automation

Mar 2024–Present

- Managed the roadmap and requirements for two internal products: an enterprise notification platform and an n8n-based workflow automation platform, working with two dedicated engineering teams and cross-functional stakeholders in a SAFe environment.
- Supported the phased migration of all 34 products using the legacy SMS service to the centralized notification platform over two years, with rollback readiness and no service interruption.
- Prioritized platform improvements that supported an increase in throughput from 14 to 600 TPS and reduced high-volume notification delivery time from approximately four hours to 20 minutes.
- Evaluated competing business requirements against user needs, implementation complexity, and expected business value, helping stakeholders align on a simpler governance model.
- Facilitated the delivery and adoption of 33 automated journeys across activation, onboarding, retention, and cross-selling. Selected workflows reduced campaign setup time from approximately one week to a few minutes and supported a short-term increase of more than 70% in first-trade activation among targeted new customers.
- Coordinated requirements and dependencies across stakeholders, Data, BI, Engineering, and external vendors; secured a one-month contract extension following vendor-side integration delays.

Associate Product Manager

Oct 2023–Mar 2024

- Interviewed the Business Owner, stakeholders, legacy-platform users, and operational support teams to understand governance constraints, existing workflows, user needs, and platform limitations.
- Categorized research findings and translated them into product requirements, PRDs, MVP scope, roadmap input, and data for product decision-making.
- Collaborated with the Product Manager on product vision and roadmap development and supported the prioritization of essential UX and UI improvements for subsequent releases.

Business Researcher — Concurrent Role

Sep 2021–Present

Primary focus through Sep 2023; continued with a reduced scope after transitioning to Product Management.

- Conducted strategic research and global benchmarking to support executive decisions on business transformation, operating models, customer experience, and organizational design.
- Co-developed Customer Service structures, career paths, competency frameworks, job descriptions, and role definitions in collaboration with senior leadership.
- Produced research and recommendations used in organizational redesign and complex cross-functional initiatives.

Customer Service & Call Center Operations

May 2020–Sep 2022

- Progressed through written and email support and telephone support before joining the newly established Call Center Operations team.
- Contributed research, translation, documentation, and training content for managers and supervisors, and developed knowledge assessments and structured technical and aptitude-based questions for operations recruitment.

CORE COMPETENCIES & TOOLS

Product and Strategy: Product Discovery, User & Stakeholder Interviews, Problem Validation & Definition, PRDs, Product Roadmapping, Prioritization, MVP Scoping, Data-informed Decision-making

Platforms and Delivery: Internal Platforms, Workflow Automation, Customer Journey Automation, Service Migration, API and Integration Fundamentals, Vendor Management, Cross-functional Alignment, SAFe, Agile Delivery

Data and Reporting: SQL, Data Analysis, Looker Studio, Navicat, MySQL Workbench, SQL Server Management Studio

Product and Collaboration Tools: Jira, Confluence, Microsoft Office

Integration and Automation: Postman, n8n, WebEngage

AI-assisted Research and Productivity: NotebookLM, Codex

Additional Technical Capability: Database Querying, Data Interpretation, Workflow Design, JavaScript Code Comprehension

EDUCATION

MBA, International Business Management · Institute for Management and Planning Studies

2019

BSc, Information Technology Engineering · Payame Noor University

2015
